

EPA National Health Advisory

Recently the ADEM, in conjunction with the EPA and CDC issued a final health advisory for contaminants in drinking water. Several water systems in the state were named showing a presence of these chemicals.

The Northeast Alabama Water District was identified as one of these systems. It has been determined that the source was a connection to Centre Water Works which was serving a small area around the City of Centre.

Northeast Alabama Water District had a purchase agreement with Centre Water Works that expired in early April of this year, at which time we stopped receiving water from this source.

I want to assure all of customers that Northeast Water does not have these contaminants present in any of our water.

Sincerely,

A handwritten signature in black ink, appearing to read 'Johnny Jordan', with a long horizontal flourish extending to the right.
